Elephant

"The elephant is the largest animal that lives on land. Among all animals, only some kinds of whales are larger. The elephant is also the second tallest member of the animal kingdom. Only the giraffe is taller. Elephants are the only animals that have a nose in the form of a long trunk, which they use as a hand.

Wild elephants perform several important natural functions. An example is elephants dig holes in dry riverbeds to reach the water beneath the surface of the ground."
